

NEW ENGLAND DEACONESS HOSPITAL

ANNUAL REPORT

1934

The instinct to provide for those sufferers who are not able to care for themselves is the motive responsible for the growth and development of the Deaconess Hospital. The need and opportunity is greater than ever.

REPORT OF THE SUPERINTENDENT TO THE ANNUAL MEETING OF THE CORPORATION

INCREASE IN BUSINESS

It is unfortunate to have to base our successes on the ills of humanity. When we say we have had a good year, it may be because more people have been sick which, if true, makes our success lean upon other people's misfortunes. But perhaps it is because more sick people have sought our hospital. This is probably the case. During the past few years, the services of our staff have become more varied and far-reaching; they cover more fields of medicine and surgery and consequently draw more patients from a larger area. During the Clinical Congress of the American College of Surgeons held in Boston last October, approximately 1500 surgeons visited our clinics at the Deaconess and Palmer, which shows our growing popularity.

HELP TO PATIENTS

The changes we made at Palmer a little more than a year ago — lowering our rates and making a full floor available for poorer patients — has been a decided help to the poor and to the hospital as well. The building and opening of the George F. Baker Clinic has added all the known facilities for the study and care of diabetics, and it is hoped that this unit may be the first of a series of centers to be constructed in the United States for the study and care of the diabetic. Our patients come from far and wide. During the year, we have had patients from 36 states of this country; also from Canada and the Provinces, Cuba, England, Palestine, the Philippines, Hawaiian Islands, and Cristobal in the Canal Zone. Visiting doctors have come from every state in the Union, from Canada, Italy, France, England, Spain, Turkey, Scotland, China, Africa, Syria, the Philippines, Poland, and the Hawaiian Islands. When we say, therefore, that we have had a good year, it means that we have been helpful to an ever increasing number.

STRENGTH OF ORGANIZATION

Furthermore, we have, during the year, strengthened our position as an institution. Our Board of Trustees and all our committees are stronger; the Executive Committee which you elected last year has performed its various tasks with remarkable faithfulness and efficiency; our new Treasurer, Francis W. Capper, has taken a keen interest in all the hospital activities and has been unusually helpful; the members of the Physical Properties Committee, which has had charge of the boiler plant and elevator reconstruction, have given generously

THE GEORGE F. BAKER CLINIC

of their time and expert knowledge. The results are now showing in definite savings. Our Investment and Finance Committees have shown more activity of a helpful character than before and we have had faithful, loyal service from all our employees. The combination of all these factors: staff, trustees, committees, employees, has given us an outstanding year.

CENSUS VS. INCOME

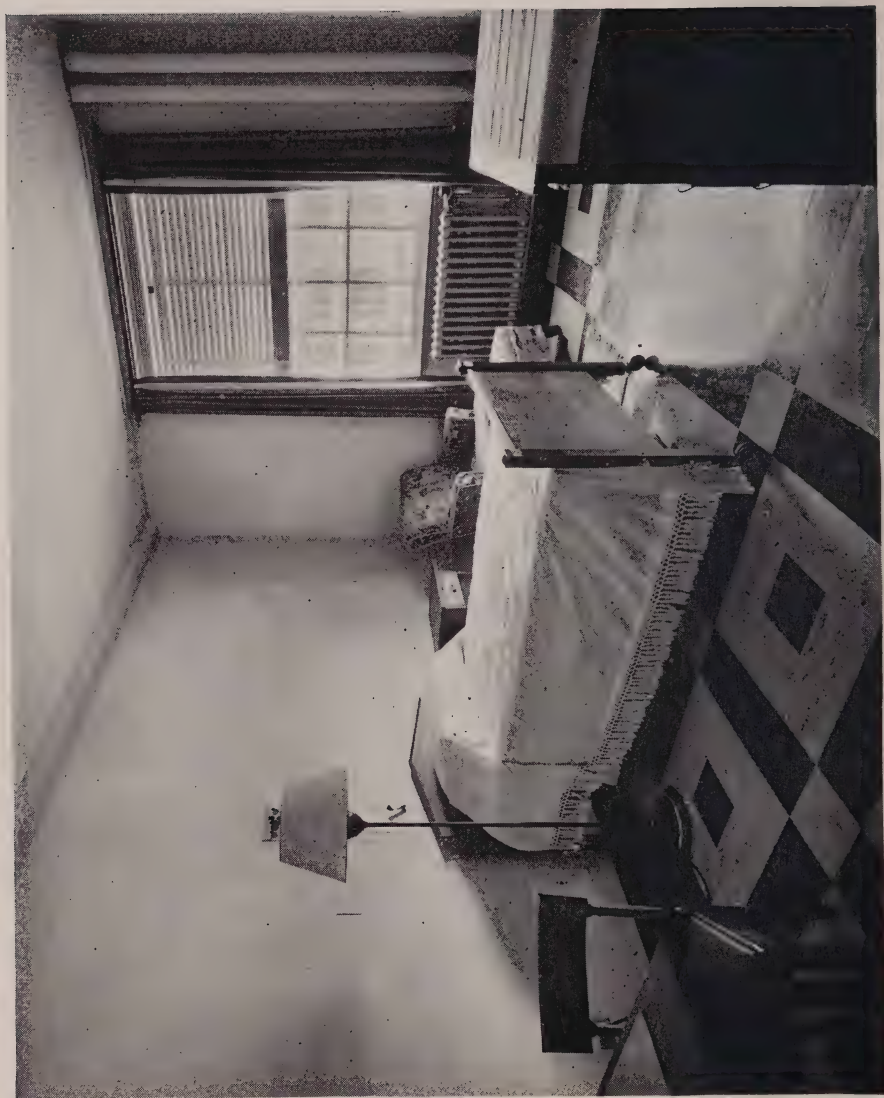

The 1929 census was the highest the hospital has known. While the census and income are slightly lower this year, expenses have been greatly reduced so that our gains are much higher. The patient income shows an increase over last year of \$92,230 or 20%. The patient census increase is just 20% and I think it is noteworthy that patient income has kept pace with patient day increase in these times. The experience of most hospitals is that their wards, on which they lose money, have been full, and the private accommodations discouragingly empty, but the percentage of our patient day increase and patient income increase are almost identical. Expenses have increased approximately 14% leaving us a margin of 6% or \$45,000. In reality, this is larger because 25% of the pharmacy store income is from patients in the house. This would add approximately \$5,000. The per capita cost has been reduced thirty-four cents.

INCREASE IN EXPENSE

The character of our work has increased the expenses in many departments. Our laboratory work has grown. We did 104,650 tests in the chemical laboratory compared with 86,310 last year. The pathological laboratory work has increased 25%. There were 46 more autopsies and an increase of 1,257 examinations. The income more than cares for the expense. Pharmacy store business has gone far ahead of last year.

EXTRA EXPENSES — IMPROVED FINANCES

We have had some unusual expenses this year. Certain foodstuffs and medical and surgical supplies have gone up sharply in price. In January, we took over Dr. Morrison's X-ray equipment and paid for it; we finished paying for our heating plant; we built one new elevator and did extensive repairs on two others; we bought the furnishings for four floors of the George F. Baker Clinic. A new dental room, foot room, and medical library have been completely equipped from Dr. Joslin's funds. We built a new refrigerated garbage plant, put in new floors and equipment in the Deaconess kitchen, a much needed roof over the laundry ramp, and quite generally improved our property by extensive painting, carpentry, etc. In addition, we have reduced our indebtedness over \$52,000. In other words,

PRIVATE ROOM
THE GEORGE F. BAKER CLINIC

we have paid all our current hospital bills, including \$48,000 interest, and spent \$44,000 for betterments; we have given \$63,650 worth of full free care to the poor beside the services of doctors; our endowments have been increased \$65,000; our accounts receivable are \$3,500 better than a year ago, our accounts payable have been reduced \$20,000, our notes payable are \$32,000 less, our inventories are \$10,000 more, our assets are \$314,000 higher and our total deficit has been reduced \$148,771.

CHANGES MADE FOR GREATER CONVENIENCE

We have made certain changes during the year. Because of the crowded condition of the Deaconess lobby during visiting hours, we decided to try admitting ward patient visitors at the Pilgrim Road entrance instead of the main entrance. There are no ward patients on the Deaconess first floor. The Pilgrim Road entrance brings you directly to the second floor and many visitors will walk up to the third. This has relieved the overcrowded condition in the first floor lobby and taken about half the load off the elevators with no inconvenience to visitors.

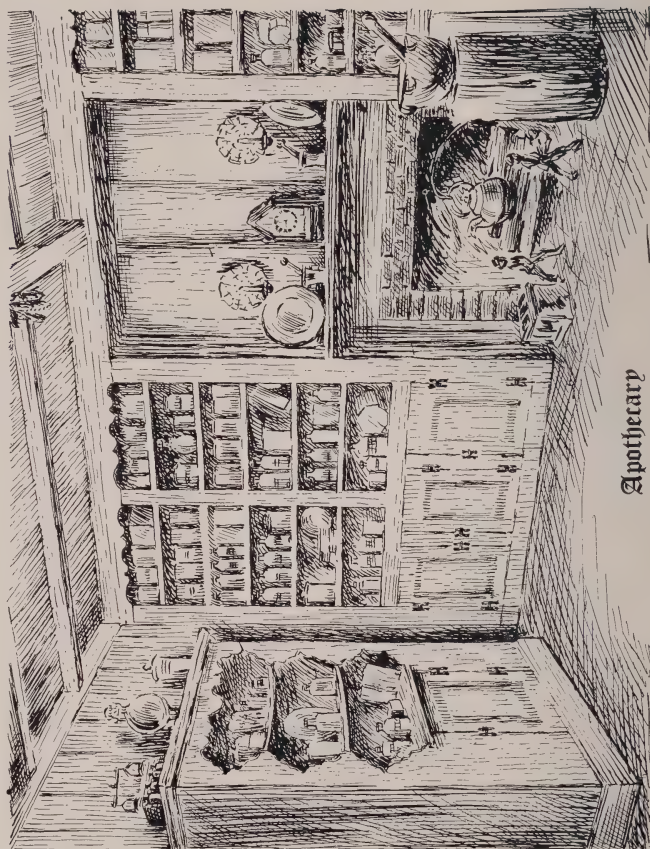

The building of the George F. Baker Clinic made necessary the employment of more nurses. The executive offices occupied a part of a floor of the nurses' home. We moved these offices to the first floor of the Deaconess building and made room for fourteen more nurses. This has put the administration in closer touch with the work of the hospital and made possible the giving up of all outside apartments.

ADDITIONS IN PERSONNEL

Mr. William B. Nash was added to the administration staff several months ago to assist the treasurer and the superintendent. He has given faithful and careful study, especially to financial matters. The condition of our accounts receivable is a reflection of his work. We have employed a new social worker this year so that now our social service department covers both Palmer and Deaconess. We expect to benefit greatly by this addition, as we have at Palmer.

NEEDS THIS YEAR

Now, during the year before us, we should pave Deaconess Road in front of the Deaconess building. This road is a constant expense and usually in poor condition. Some of our trustees who have influence at City Hall could do us a good turn by making the mayor or street commissioner see that the streets about the Deaconess Hospital are becoming a series of patches. If we can raise the money, we should enlarge the operating suite at the Deaconess building this year. Our census has increased but our surgery has even more. What our surgeons would say to Dr. Cabot's contention I do not know, but I do

Apothecary

know that our rooms and equipment are too small for our growing work. I believe the Executive Committee feels, however, that our most urgent need is the reduction of accounts payable by at least \$50,000.

DEATH OF MISS BETTS

In November of this year, we lost from our midst Miss Adeliza A. Betts. She was 81 years old and had been with us 32 years. She was not long sick. She ate dinner as usual on Friday night, November 9th. She did not go to bed until Saturday at 4:00 o'clock and died Sunday at 2:30. Her body lay in the Nurses' Home Tuesday all morning. We had brief services there at noon and at 2:30, we buried her from St. Mark's Church. Her body was cremated and the ashes taken by Miss Harding to Nova Scotia to rest with her father and mother. Miss Betts was beloved by all who knew her. Her presence was always an inspiration. She never criticised or found fault. She was a blessing which all of us who came in daily contact with her will greatly miss. Her presence was as a soft radiant light pointing the way back down the corridors of time to those early days of sacrifice and personal service which can so easily be lost sight of in our larger and busier day.

With profound gratitude to all who have co-operated to make this an outstanding year, I submit this report.

WARREN F. COOK,
Superintendent.

Expense of operating Baker Clinic before admission of patients	1,462.83	148,245.64
Surplus for the year		\$ 38,195.20

NOTE.—For several years the hospital has been faced with the necessity of liquidating its indebtedness. A campaign to raise funds for that purpose was started in 1931 but was stopped at the beginning of the first Boston Emergency Relief Campaign. This made it necessary to reduce expenses radically in order to satisfy creditors and continue operations.

The surplus for the year ended December 31, 1934 was used to liquidate a portion of the indebtedness of the hospital.

Respectfully submitted,

FRANCIS W. CAPPER,
Treasurer.

AUDITORS' CERTIFICATION

New England Deaconess Hospital,
Boston, Massachusetts.

We have examined the accounts of New England Deaconess Hospital as at December 31, 1934 and we certify that, in our opinion, the foregoing balance sheet presents the financial condition of the hospital at December 31, 1934, and the accompanying statement of income and expense sets forth the recorded income and the expenses for the year then ended.

LYBRAND, ROSS BROS. & MONTGOMERY.

Boston, Massachusetts,
April 27, 1935.

REPORT OF THE SOCIAL SERVICE DEPARTMENT

The only reason for the existence of a hospital is to restore sick people to health or to make comfortable and keep free from pain the chronically ill. How does the social service worker fit into this scheme of things? What are her duties? Is there any special service she can offer to the patient that is not already being adequately given by the doctor, nurse, or administrative officer? Let me illustrate.

"I don't know what to do about Mrs. M.," says Dr. T. to the social worker. "Her condition is chronic. She has already spent two months in the hospital and wishes to leave. I don't like to think of her traveling in the middle of winter to her home in the country where she lives alone with no close neighbors." The contribution of the social worker in this case consisted in becoming so well acquainted with the patient that she learned her hopes and fears and also that her chief desire was to die in the house where she had spent forty years of happily married life. It was learned that there were sufficient funds to care for food, fuel, and medicine, but little else besides. There was no immediate family, but two distant relatives were located and future plans discussed with them. They aided in procuring an ambulance for the 150-mile trip. The local public welfare officials were approached, and agreed to pay for an attendant to live with the elderly lady as an alternative to placing her in an institution. We heard a week later that she had stood the trip fairly well and was happy to be home.

Here is another type of aid. "Will you please get acquainted with Mr. L.," asks the floor supervisor. "He is a severe diabetic who has had a thigh amputation and is now ready for discharge. He does not wish to leave the hospital because there is no one at home to care for him and he cannot afford to buy insulin and his special diet." The social worker found that this patient formerly was a prosperous business man in his community; was now practically destitute due to his long illness and the economic depression. His wife suffered from pernicious anemia and needed expensive medicine and diet. Two children living away from home were able to contribute the rent, but not enough additional to care for sufficient food, medicine, and fuel. Small wonder that he felt loathe to leave his comfortable hospital bed! The home was visited; the wife and children interviewed. A budget, covering only absolute necessities but including insulin and liver extract, was carefully worked out and this was discussed with the local welfare society who agreed to supplement the children's

wages. The district nurse who visits the couple twice a week reports that all is going well.

46 patients were aided with visiting nurse service.

53 patients were assisted with transportation.

60 patients were helped to obtain nursing, convalescent, or boarding homes.

208 welfare agencies were contacted in behalf of 486 patients.

From June 12, 1933, the time the department was started, to December 31, 1934, 1,043 patients have been contacted by the social worker. An effort was made to form such a pleasant contact that the patients felt free to return to the worker to discuss not only their illness but their social and economic problems as well. These were found to be many and, as an aid in solving them, a relief fund was raised. From this fund \$485.31 was used in paying traveling expenses to and from the hospital, for convalescent care, medicine, and in several instances food and clothing.

Although social service was begun in the Palmer Memorial Unit and was to be used primarily for cancer patients, almost from the beginning Deaconess Hospital cases have been referred and a total of 138 were dealt with. An additional social worker to aid in developing this service to cover the entire hospital has been engaged for the coming year.

Developing a social service department in an institution which has never had one before is bound to be, for that very reason, a challenging job. That it is supplying a real need seems demonstrated by the fact that the department has been, from the beginning, used consistently by the administration and by the staff. The co-operation given the social worker by both departments has been unusual and has made what would ordinarily have been an arduous task, an interesting, happy experience.

GERTRUDE S. JAMESON,
Director of Social Service.

December 31, 1934.

THE TRAVELING LIBRARY

Being firmly convinced that good books have a therapeutic value as well as being a source of entertainment, the Social Service Department has made a beginning in developing a free, traveling, lending library with bedside service for all units of the hospital. The administration has co-operated heartily in having a fine book wagon built and in buying supplies necessary for cataloguing, recording, and repairing books.

The interest of the Simmons College Library School was enlisted and, with their aid, a trained experienced librarian has been obtained to give her services thirteen hours weekly to the library as an E.R.A. project and without cost to the hospital. During the period of bedside visiting, which started in the middle of November, and until the end of the year, our 287 books circulated 379 times to 350 patients.

This service, which began as a Palmer and Baker Clinic project, is being extended to cover the Deaconess Hospital proper, and the local E.R.A. office is providing us with another worker until June, 1935, to care for this extra service. The hospital is therefore getting slightly more than one-half time professional library service without cost.

The book truck is being most cordially received by all parts of the hospital organization. Hear the doctor say, "Please go to Room 1; it would do Mrs. S. no end of good if you could get her interested in some reading." Then the nurse: "We've needed this book truck a long time in this hospital; I don't know how we got along without it." And the patient: "This is one of the nicest things you could do. I'm not lonesome at all and forget my trouble as long as I have a book to read."

To insure the future development of this project a permanent committee of interested people must be organized who will devise ways and means of getting additional books and who will be responsible for the continuance of the professional service.

GERTRUDE S. JAMESON,
Social Service Department.

REPORT OF THE MEDICAL STAFF

The work of the Staff during the past year has been heavy. The care of the sick poor by physicians and surgeons without charge is so old and well established a generosity of the medical profession that it has come to be regarded as matter of course. I know of no hospital that includes in the financial statement of the free work done any estimation of the costly services contributed by its Staff, even though this is the most valuable part of the patients' care and without this their stay in the hospital would be unavailing. This contribution by the doctors, gladly and freely made, is paralleled by the generosity of others to the hospital. Thus we have the fine contribution from the Emergency Relief Campaign, a large gift from an unknown donor that makes possible the extension of the services of the Palmer Memorial Hospital and its Staff to a large number of cancer sufferers, and to come nearer home, the example of our President, who in addition to other generousities, donates all the profits received from his sale of the large amount of insulin to the hospital to further its work.

Several advances deserve special notice. The opening of the George F. Baker Clinic has added greatly to the facilities of the hospital, providing as it does not only additional beds but much needed laboratory space for research and adequate housing for the numerous activities related to the care of the diabetic patients. The development of the neuro-surgical service of the Lahey Clinic has been carried further, a service which only rare hospitals can equal. Facilities for treatment of needy cancer patients at the Palmer Memorial Hospital have been further developed.

The educational activities of the Staff should not be lost sight of. This year at the Palmer Memorial Hospital the use of graduate internes has proved satisfactory and has given an opportunity to selected medical graduates for training in the care of cancer patients. I feel that few of the Corporation realize the valuable work done by the Lahey Clinic each year in providing advanced medical and surgical training as Fellows to men with considerable post-graduate hospital experience who desire to complete their education.

The new Medical Library, supported during the year by donations from the Staff, and newly equipped by a donation of \$1,000 obtained through two of the Staff members, is housed in the George F. Baker Clinic building.

The research activities carried on by the Staff are of two types, so-called clinical research, embodying the investigation of methods of treatment and their efficacy, the behavior of types of disease, and so forth, and what we might term "pure" research where various prob-

lems of importance to the understanding of disease, apart from the immediate care of the patient, are studied.

The long roll of publications by the Staff members speaks well for the volume and the quality of research work being done.

I should specially like to mention the new research laboratories in this building, which illustrate well co-operative effort and the way in which the hospital receives credit from the work done here. Immediately above us is a room where a research chemist and his assistant, financed by Dr. Lahey, are exploring an entirely new field, determination of the amount of iodine in the blood, which will have important relationship to the understanding of thyroid disease. Farther down the hall, Dr. Marble and an assistant, supported by funds obtained by Dr. Joslin, are at work on problems of fat metabolism in diabetes. Others of the laboratories are being used for research work in pathology, particularly in the field of cancer, work financed in a large part by funds obtained from Harvard University.

The Staff has been fortunate in losing none of its members this year and several new ones have been added:

NEW ENGLAND DEACONESS HOSPITAL

URBAN H. EVERSOLE, M.D.	Anesthetist
CHARLES A. LAMB, M.D.	Surgeon
JAMES L. POPPEN, M.D.	Neurosurgeon
CLARENCE J. TIDMARSH, M.D.	Physician
S. ALLEN WILKINSON, M.D.	Physician

PALMER MEMORIAL HOSPITAL

HERBERT ADAMS, M.D.	Assistant Surgeon
---------------------	-------------------

The Staff feels deeply the loss of our beloved former Superintendent, Miss Betts, to whose enthusiasm, ability and foresight no small part of the development of the hospital is due.

Respectfully submitted,

SHIELDS WARREN,
Chairman of the Staff.

REPORT OF THE PATHOLOGIST

The increased activity of the hospital during 1934 has greatly increased the volume of work done in the laboratories. This is in part because of the number of patients admitted and in part because of the relatively large proportion of the patients with very serious illnesses requiring a considerable number of laboratory tests. The flat laboratory fee has minimized expense for the patients and has been financially satisfactory to the hospital.

CHEMICAL LABORATORY

The opening of the George F. Baker Clinic has increased the complexity of the laboratory work. Fortunately a small but well equipped laboratory on the first floor of the Baker building was opened May 8, 1934, and here many of the tests from both the Baker Clinic and the Palmer Memorial Unit are carried out. Without this additional space the problem of handling the greatly increased volume of work in our present laboratories would have been almost insoluble.

The major increase of work is in the clinical bloods, the total number of which were 21,210 as against 11,694 of 1933, an increase of almost 100%. The clinical bloods include blood counts, bleeding and clotting time, groupings and cross matching. There have been a great many of the latter during the past year. The average has been approximately 100 to 120 per month.

The studies of blood lipoids in cases of thyroid disease and diabetes have been continued.

I particularly desire to commend to the Trustees the excellent work done by Miss Hunt and her technicians in the face of many difficulties. That the increased volume of work has been handled with a relatively slight increase in staff speaks well for their skill and their loyalty to the institution.

Of the various procedures, 91,256 were carried on in the Deaconess laboratory as against 10,146 in the Baker laboratory and 3,248 in the small frozen section laboratory at the Palmer operating room.

Statistics

	1934	1933

Miscellaneous Tests.....	321	112
Total.....	104,650	86,310

LABORATORY OF PATHOLOGY

There has been a marked increase in the routine work of the Pathological Laboratory. Research work has not received much attention owing to lack of funds.

The study of the pituitary gland in diabetes mellitus has been continued with the co-operation of Dr. Harvey Cushing and Dr. Louise Eisenhardt.

The studies on metastasis to bone in carcinoma of the prostate, carried on under a grant from the Wellington Fund of the Harvard Medical School, have been practically completed.

During the year the pathological work done for the Robert B. Brigham Hospital has been dropped for financial reasons.

There have been the usual changes in personnel during the year. Dr. Olive Gates resigned as Assistant Pathologist September 1, 1934 to become Assistant Pathologist to the Harvard Cancer Commission. Dr. Paul N. Harris from the Department of Pathology, Western Reserve University, is now Assistant Pathologist. Dr. John Fallon finished his appointment as Littauer Fellow in pathology September 1, 1934, and his place has been taken by Dr. J. R. E. Morgan from the University of Toronto. Drs. J. C. Donchess and W. B. Macomber completed their appointments during the year and have been succeeded by Dr. Robert Fienberg as Resident and Dr. Joseph E. Porter as Interne.

The investigation of methods of metastasis of cancer has been continued on a small scale.

Respectfully submitted,

SHIELDS WARREN,
Pathologist.

REPORT OF THE PRINCIPAL OF THE SCHOOL OF NURSING

In the recently revised school prospectus we express our objective. "It is the purpose of the board of trustees, training school committee, and officers of the school of nursing to maintain and promote standards which will express the ideals of the founders. Their aim is also to prepare nurses for participation in the prevention of illness and care of the sick in the community as well as in the hospital, and to furnish a good foundation for additional preparation for the work of administration, teaching and public health." Since practically all of our graduates taking post-graduate courses have been able to secure positions, it would seem that the basic three year course offers adequate preparation for further work in specialized fields of nursing.

All nursing care in the new George F. Baker Clinic Building is given by graduate nurses. This insures (1) a more expert, also a smoother service, than can be given by student nurses who must be released for classes and affiliations and (2) affords employment for a number of graduates.

The committee elected by the alumnae association has completed the revision of the history of the school and to the history has been added a list of the graduates. It is with interest and pride that we mention some of the fields into which the 592 alumnae have gone. Thirty-eight were enrolled in the nursing service during the World War and 6 of these nurses received decorations for outstanding services. Ten graduates of the school have served in the foreign mission field: at present, 5 are located in India. Twenty-two graduates have been deaconesses. Many of the alumnae of the school are filling positions of responsibility in hospitals and in public health work. Over 200 are doing private duty nursing and hospital specializing. A large number are married and engaged in home making.

In accordance with the recommendations of leaders in nursing education we are continuing to make a more careful selection of candidates for the School. As one result, during the past year very few students have been dropped from the school enrollment because of poor scholarship. We realize that good scholarship alone does not produce the successful nurse — she must also have an acceptable personality and strength of character — but we are convinced that there usually is a very direct relationship between the quality of a student's scholarship and the service she renders to her patients. The number of applicants has not been affected by the raising of the scholarship requirement nor by the increase of tuition at Simmons College during the preliminary term from \$75 to \$100 beginning in September of this year. The size of classes admitted during the past year has been voluntarily somewhat smaller than formerly which has

made possible the employment of a certain number of graduate nurses for general hospital duty.

Inasmuch as we are now admitting to the hospital a number of tubercular patients for chest surgery the training school committee recently voted that each student upon admission to the school be given a tuberculin test and chest x-ray. This means that in the future all student nurses will be given preventive treatment against small-pox, diphtheria, scarlet fever, typhoid fever and tuberculosis. Each nurse also receives a thorough annual physical examination as well as at other times as indicated.

We felt considerably enriched by the addition of a floor secretary to Floor III beginning last November. Such a person is able to do much to relieve confusion on such a large floor as well as help conserve the nurses' time for necessary services to patients.

During the year there have been a few changes in staff personnel. Two of the floors of Palmer Memorial now have an additional graduate head nurse; the operating room has two full time graduate "scrub" nurses and an orderly: the night service has been re-enforced by the addition of two graduate general duty nurses.

A number of our graduate special nurses have throughout the year again contributed free service to patients unable to pay for special nursing and all of the graduate staff nurses contributed $2\frac{1}{2}$ days' pay towards the 1934 Emergency Relief Fund.

With the additional rooms available through the removal of the executive offices to the main hospital building we are now able to house in Harris Hall all attendants employed at Palmer Memorial.

Two gifts amounting to \$90, from a former patient, have made possible the purchase of some necessary furnishings at Harris Hall as well as several books for the reference library.

Probably the most progressive step taken during the year was the institution in April of an eight hour day to replace the twelve hour day for special nurses. A working day of reasonable length is quite in line with present trends and under this new régime the hospital special nurse is looking forward to a better distribution of work, more time for recreation, an opportunity for professional contacts and the giving of better service. The change was made without additional charge to the patient. Thus far it appears to have proven satisfactory to the patient and the doctor as well as to the nurse.

Miss Adeliza Betts passed away on the afternoon of November 11th. She had been retired as superintendent emeritus in 1923 after 22 years of service to the hospital and had continued to live at Harris Hall. We miss her gracious presence there.

During the calendar year 58 students have been admitted: 10 have withdrawn: 48 have been graduated. Students' days lost through illness have been 817: for absence following illness 671.

Total enrollment in nursing department at close of year:

Graduate staff nurses	33½
Graduate floor duty nurses	21
Post-graduate students	1
Student nurses	151
(includes 37 in preliminary course plus 25 away on affiliations)	
Children's Hospital affiliates	3
Attendants	18
Total	227½

ANNUITIES

The New England Deaconess Hospital is organized and chartered to receive capital sums of money on an annuity basis on account of which they will pay to the donor an annual annuity (payable quarterly) during the life of the annuitant. The interest rate is necessarily based upon the age of the annuitant but is somewhat higher than the usual safe investment rate. The payment of these annuities is fully guaranteed by reserve funds. No annuitant of this hospital has ever failed to receive his interest check promptly. In these days of falling interest rates and great losses, our annuitants have felt this was their best asset.

What better investment could be made than one of this type by which the donor sees his money placed where he wishes it while still alive and also receives a safe, regular income? For details address the superintendent of the hospital, Warren F. Cook, 16 Deaconess Road, Boston, Massachusetts.

Please send me further information regarding
Deaconess Hospital Annuities.
